

Instructions for application of Allflex EID and Visual Tags

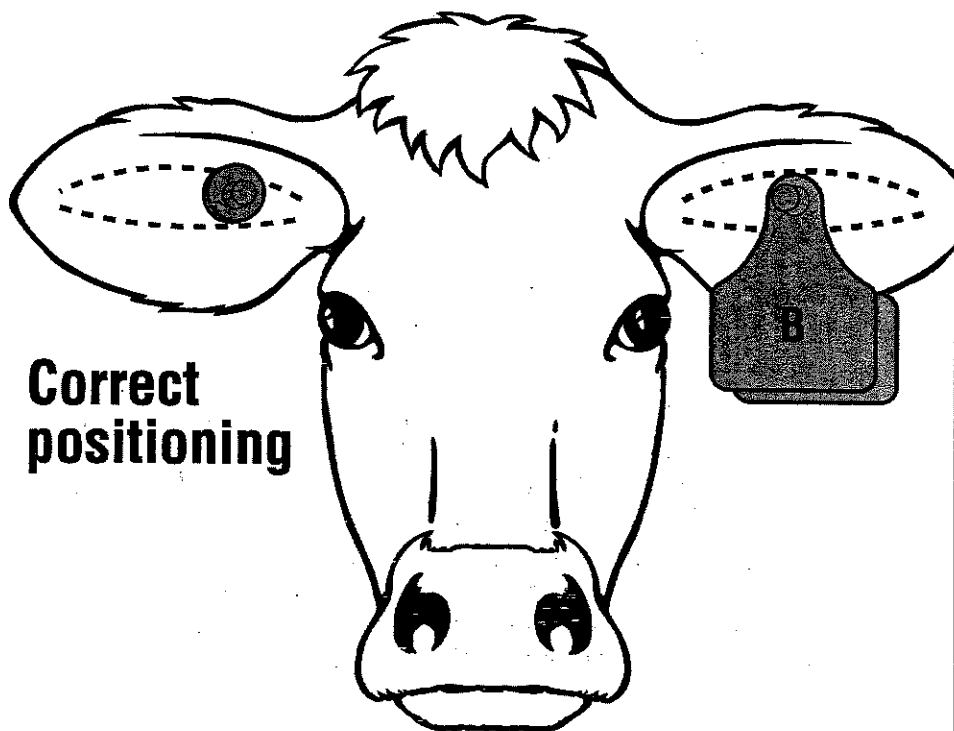

Applying EID Tags

It is recommended that all EID devices for cattle and deer are placed 25mm closer to the head than centre of the ear to allow for future application of visual management tags. It is important that the tag is placed between the two ribs in the ear.

Applying Visual Tags

Apply halfway between ear tip and the head and between the two cartilages. Always apply with the male tag (A) entering from the back (outside) of the ear and the female tag (B) facing the front.
